Ione Gassner

ione.gassner@gmail.com · linkedin.com/in/ione-gassner/ · 503-261-3716 · San Francisco Bay Area

TECHNICAL SKILLS

Programming: Python, SQL, TypeScript, JavaScript, HTML5/CSS
Backend & APIs: REST, GraphQL, WebSockets, Flask, SQLAlchemy, pytest
Cloud & Infrastructure: AWS Lambda, SQS, SNS, S3, IAM, CloudWatch, Docker, Pulumi, GCP
Data Platforms: Databricks, Snowflake, dbt, PostgreSQL
Distributed Systems & Orchestration: Temporal, Prefect, event-driven architecture, serverless systems
Frontend & Data Apps: React, Streamlit, Plotly
Languages: Japanese (Fluent)

EXPERIENCE

HyperFi San Francisco, CA
Software Engineer December 2025 – April 2026

- Built the data foundation for HyperFi's AI agent platform, turning unstructured supplier websites and customer-uploaded documents into a queryable Databricks lakehouse and RAG substrate covering 60+ telecom and cloud suppliers across 500+ data endpoints.
- Reduced LLM classification costs by roughly 80% by designing a deterministic-first pipeline that handled a majority of content chunks with rule-based matching, routing only unresolved rows to an LLM fallback tier.
- Re-architected a monolithic Temporal worker into three domain-specific compute pools, with two pools scaling to zero when idle, reducing deployment footprint and eliminating baseline compute spend for idle workloads.
- Designed multi-tenant isolation across application logic, path validation, and GCS IAM conditions, reducing cross-tenant data-leakage risk and accelerating enterprise customer onboarding.

Pure Lithium Boston, MA
Software Engineer May 2023 – August 2025

- Led migration to the AWS SAM framework, automating infrastructure provisioning with IaC, reducing costs by 60%, eliminating manual deployment, and enabling repeatable CI/CD.
- Owned ELT pipeline for 20+ diverse scientific instruments, including NMR, ICP, NIR, Neware, Palmsens, and Squidstat systems, processing over 1 GB/hour of flat-file data into analysis-ready datasets.
- Engineered the AWS ingestion and orchestration layer using Lambda, SQS/SNS, IAM, and S3 to transform raw instrument files and stage structured data for Snowflake loading.
- Translated ambiguous experimental requirements from scientists and engineers into technical specifications, data models, and internal data applications.

EDUCATION

Springboard
Software Engineering Bootcamp
800-hour course covering frontend, backend development, testing and database management systems.

University of Oregon
Bachelor of Arts, Dual Degree – Major(s): Business, International Studies, Japanese

Waseda University
Semester Abroad – School of Liberal Studies Semester Program
